

# Brain Aneurysm

Detailed Cure of Brain Aneurysm

Dated:

26.08.2024

Founded:

2024

## Overview

Objectives

- To outline the Cure for a Brain Aneurysm
- To provide some guidelines medications and possible treatments

Target Audience

- Doctors, Nurses, Medical Support, Government
- Anyone who has a brain aneurysm

Problems

- *About 25% of people who experience a ruptured aneurysm die within 24hrs.*
- *Another 25% of people have complications that lead to death within six months*

The Testing

- *There are a variety of tests that can be done these days to detect a brain aneurysm*
- *The testing is thorough and very clear in diagnosis*

Cure

- *Blood Clotting compound injected into the thigh or under the armpit. The armpit usually gets the best results as the blood flow aims towards the head first.*
- *Normal doses, with a little more to keep into consideration for the larger span of body is required to clot.*
- *The blood clotting agent dissolves the clot in the artery slowly as the same as the clotting for the whole body, does normally. The vessels do not burst and therefore there is no bleeding or complications.*
- *The body's natural response to the blood clot, helps the body recover a little quicker from the aneurysm as well so there is no long-term damage.*
- *CT Scan gets the best results for the checking the aneurysm has dissolved.*

# Risks

## Details

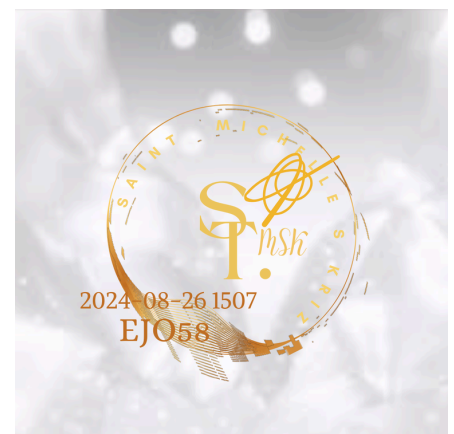

- |   |   |
|---|---|
| 1 | Not enough blood clotting compound is used and the vessel explodes anyway |
| 2 | Brain Damage if there are other complications                             |

### Statement

I declare that this is my own work and noone elses.
